

## 01 CIVIC CENTRE & LIBRARY

## **BUILDING PROFILE**

The stepped back profile allows for inter-floor visual connectivity, thus making the libray seem like one big space.

The slope of the roof is angled to get optimum solar gain possible within design constraints.

The overall impact of the project on the city is aimed at developing an active, usable, safe, and friendly pedestrian oriented space, with the added benefit of a positive cultural input in the form of a library, space for art appreciation, and economic development.
